PROFESSIONAL SUMMARY

Product-oriented Full Stack Engineer with 2.5+ years of experience designing and delivering scalable SaaS systems using TypeScript, Angular, React, and Node.js. Experienced in building modular frontend architectures, secure RESTful APIs, role-based access control systems, and real-time event-driven workflows. Strong focus on clean architecture, performance optimization, and production-grade engineering standards.

TECHNICAL EXPERTISE

Languages: TypeScript, JavaScript

Frontend: Angular (14–17), React, Next.js, Redux Toolkit, NgRx, Zustand, RxJS, React Query, Tailwind CSS, Material UI, ShadCN UI, Radix UI, Angular Material, Kendo UI

Backend: Node.js, Express.js, NestJS, REST API Design, WebSockets (Socket.io)

Databases: PostgreSQL, MongoDB

Authentication & Security: JWT, Role-Based Access Control (RBAC), Request Validation (Zod, Joi)

Cloud & Deployment: Docker, AWS (S3, CloudWatch), GCP (Cloud Storage, Pub/Sub), Firebase, Vercel

Data & ORM: Drizzle ORM, Sequelize

Engineering Practices: Modular Architecture, Clean Code Principles, Git Workflows, Code Reviews

PROFESSIONAL EXPERIENCE

Software Development Engineer

June 2023 – Present

RemoteState

- Owned end-to-end development of full-stack SaaS modules used in production across multi-role user environments.
- Architected modular Angular and React frontend systems enabling reusable components and scalable state management.
- Designed and implemented RESTful APIs using Node.js, PostgreSQL, and Drizzle ORM with strong typing and validation layers.
- Engineered JWT-based authentication and fine-grained RBAC to enforce secure access across complex workflows.
- Integrated WebSocket-driven real-time updates to support synchronized dashboards and event-based interactions.
- Deployed frontend applications on Vercel and integrated Firebase services for hosting and cloud-based functionality.
- Refactored legacy features into structured, maintainable modules reducing technical debt and improving code clarity.
- Participated in peer code reviews and iterative production releases following structured Git branching strategies.

PROJECTS

Cab Buddy – Real-Time Ride Matching System ([GitHub Repo](#))

- Built a MERN-based ride booking system supporting two roles: User and Captain with separate authentication and navigation flows.
- Implemented real-time ride request and status updates using Socket.io for bidirectional communication.
- Integrated Google Maps APIs for location search, route visualization, and fare estimation logic.
- Designed RESTful APIs with Node.js and Express for ride creation, driver assignment, and trip lifecycle management.
- Structured MongoDB schema models for users, captains, rides, and trip history tracking.

Blogify – Role-Based Content Platform ([Frontend](#) | [Backend](#))

- Built full-stack blogging platform using React, Redux Toolkit, Node.js, and PostgreSQL.
- Designed secure JWT authentication and permission-driven content access.
- Structured backend with layered architecture and validation for maintainability.
- Containerized PostgreSQL using Docker and deployed services in controlled environments.

Book Nexus – Library Workflow Management ([GitHub Repo](#))

- Developed Angular-based administrative dashboard and backend APIs using Node.js.
- Implemented authentication flows and structured database models.
- Focused on component-driven UI architecture and maintainable backend services.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering

IMS Engineering College, Ghaziabad (2019 – 2023)
