Professional Summary

Full Stack Engineer with 3 years of experience building scalable SaaS applications using TypeScript, Angular, React, and Node.js. Experienced in developing AI-powered applications using RAG pipelines and LLM integrations to enable intelligent document querying and conversational interfaces.

Technical Expertise

Languages: TypeScript, JavaScript

AI / LLM Development: Generative AI, Retrieval-Augmented Generation (RAG), LangChain, LLM API Integration, Prompt Engineering, Vector Embeddings, Semantic Search

Frontend Development: Angular (14–17), React, Next.js, Redux Toolkit, NgRx, Zustand, RxJS, React Query, Tailwind CSS, Material UI, ShadCN UI, Radix UI, Kendo UI

Backend Development: Node.js, Express.js, NestJS, RESTful APIs, WebSockets (Socket.io)

Databases: PostgreSQL, MongoDB

ORM / Query Builders: Drizzle ORM, Sequelize

Authentication & Security: JWT, RBAC

Validation: Zod, Joi

Cloud & DevOps: Docker, AWS (S3, CloudWatch), Firebase, Vercel

AI Developer Tools: Claude, Cursor, Gemini

Professional Experience

Software Development Engineer

June 2023 – Present **RemoteState**

- Delivered 5+ production SaaS modules across multi-role enterprise systems.
- Built scalable Angular and React applications with reusable component libraries, reducing feature delivery time by 30%.
- Developed optimized REST APIs using Node.js and PostgreSQL, improving response performance by 25%.
- Implemented JWT authentication and RBAC across 15+ secure workflows.
- Engineered real-time updates using WebSockets for dashboard synchronization.
- Reduced technical debt by restructuring legacy modules and improving maintainability.
- Deployed applications using Docker workflows and cloud platforms including Vercel and Firebase.

Projects

Retrieval-Augmented AI Knowledge Assistant (RAG + Grok API)

- Built a ChatGPT-style conversational AI application using **Next.js** and **Grok API**.
- Implemented **PDF ingestion**, **document chunking**, and **vector embeddings** for semantic search.
- Designed a **Retrieval-Augmented Generation (RAG)** pipeline using **LangChain**.
- Integrated Grok API to generate responses grounded in retrieved document context.
- Implemented request limiting using **Redis** to enforce trial usage caps after five queries.
- Enabled natural language querying of company policy documents via an interactive chat interface.

Cab Buddy – Real-Time Ride Matching System [GitHub Repository](#)

- Built a full-stack ride-booking platform supporting dual-role authentication (User & Captain).
- Implemented real-time communication using Socket.io for ride lifecycle updates.
- Integrated Google Maps APIs for route calculation and trip visualization.

Blogify – Role-Based Content Platform [Frontend](#) — [Backend](#)

- Built a blogging platform with JWT authentication and permission-based access control.
- Structured backend services using layered architecture for improved scalability.
- Containerized PostgreSQL with Docker for consistent development environments.

Education

Bachelor of Technology – Computer Science and Engineering

2019 – 2023

IMS Engineering College, Ghaziabad
